

org.apache.commons.math.util.
ResizableDoubleArray.addElement

```
graph LR; A[org.apache.commons.math.util.  
ResizableDoubleArray.addElement] --> B[org.apache.commons.math.util.  
ResizableDoubleArray.expand]; A --> C[org.apache.commons.math.util.  
ResizableDoubleArray.contract];
```

The diagram illustrates a branching call from the `addElement` method to two other methods: `expand` and `contract`. The `addElement` box is shaded gray, while the other two are white. Blue arrows indicate the flow of the call.
